

Identifying methylome- metabolome interactions

Koen Dekkers

k.f.dekkers@lumc.nl

Molecular Epidemiology

Leiden University Medical Center

The Netherlands

- Atherosclerosis is a lipid-driven immune disease
- Lipids epigenetically prime circulating immune cells, possibly affecting the development of atherosclerosis

**BBMRI.nl**Biobanking and
BioMolecular resources
Research Infrastructure
The Netherlands

- Six cohorts
 - CODAM, LL, LLS, NTR, PAN, RS
 - 3296 subjects
 - Whole blood

- Measurements
 - Methylome - 450k array
 - Genome - imputed SNP arrays
 - Transcriptome - RNA-Seq (n = 2044)
 - Lipids
 - Cell counts

- Linear model per cohort per CpG
 - DNA methylation \sim lipid + gender + age + cell counts + batches
 - Correction for inflation

- Meta-analysis per CpG
 - Fixed-effect
 - Correction for inflation
 - Correction for multiple testing (FDR < 0.05)

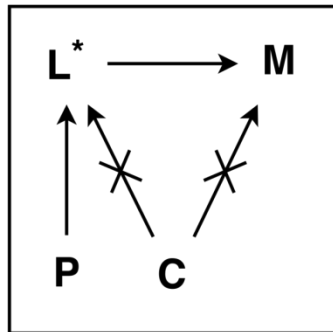

| | |
|-------|----|
| TG | 21 |
| LDL-C | 3 |
| HDL-C | 4 |

Mendelian randomization

TG 21
LDL-C 3
HDL-C 4

| | Variants | F-stat | R ² |
|-----------------|----------|--------|----------------|
| Triglycerides | 30 | 157 | 5.6% |
| LDL cholesterol | 28 | 99 | 3.6% |
| HDL cholesterol | 60 | 164 | 5.1% |

1. lipid ~ PS + gender + age + cell counts + batches
2. DNA methylation ~ predicted lipid + gender + age + cell counts + batches

Mendelian randomization

| | | | |
|-------|----|--------|---|
| TG | 21 | | 9 |
| LDL-C | 3 | —————→ | 2 |
| HDL-C | 4 | | 2 |

| | Variants | F-stat | R ² |
|-----------------|----------|--------|----------------|
| Triglycerides | 30 | 157 | 5.6% |
| LDL cholesterol | 28 | 99 | 3.6% |
| HDL cholesterol | 60 | 164 | 5.1% |

1. lipid ~ PS + gender + age + cell counts + batches
2. DNA methylation ~ predicted lipid + gender + age + cell counts + batches

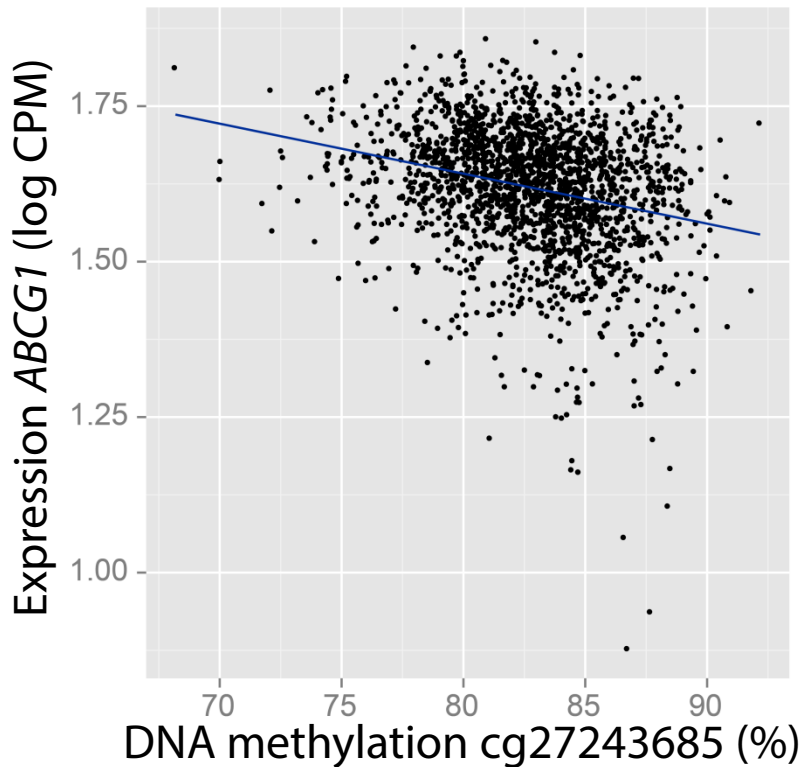

- Additional analyses to correct for pleiotropic effects

| | EWAS P-value | MR P-value |
|------------------------|-----------------------|----------------------|
| Triglycerides | | |
| cg00574958 | 1.0×10^{-28} | 1.5×10^{-3} |
| cg17058475 | 1.4×10^{-11} | 2.5×10^{-3} |
| cg11024682 | 4.2×10^{-16} | 5.4×10^{-3} |
| LDL cholesterol | | |
| cg27168858 | 2.3×10^{-8} | 3.1×10^{-3} |
| HDL cholesterol | | |
| cg27243685 | 5.4×10^{-15} | 2.2×10^{-3} |
| cg06500161 | 2.9×10^{-19} | 3.5×10^{-4} |

Linking DNA methylation to gene expression

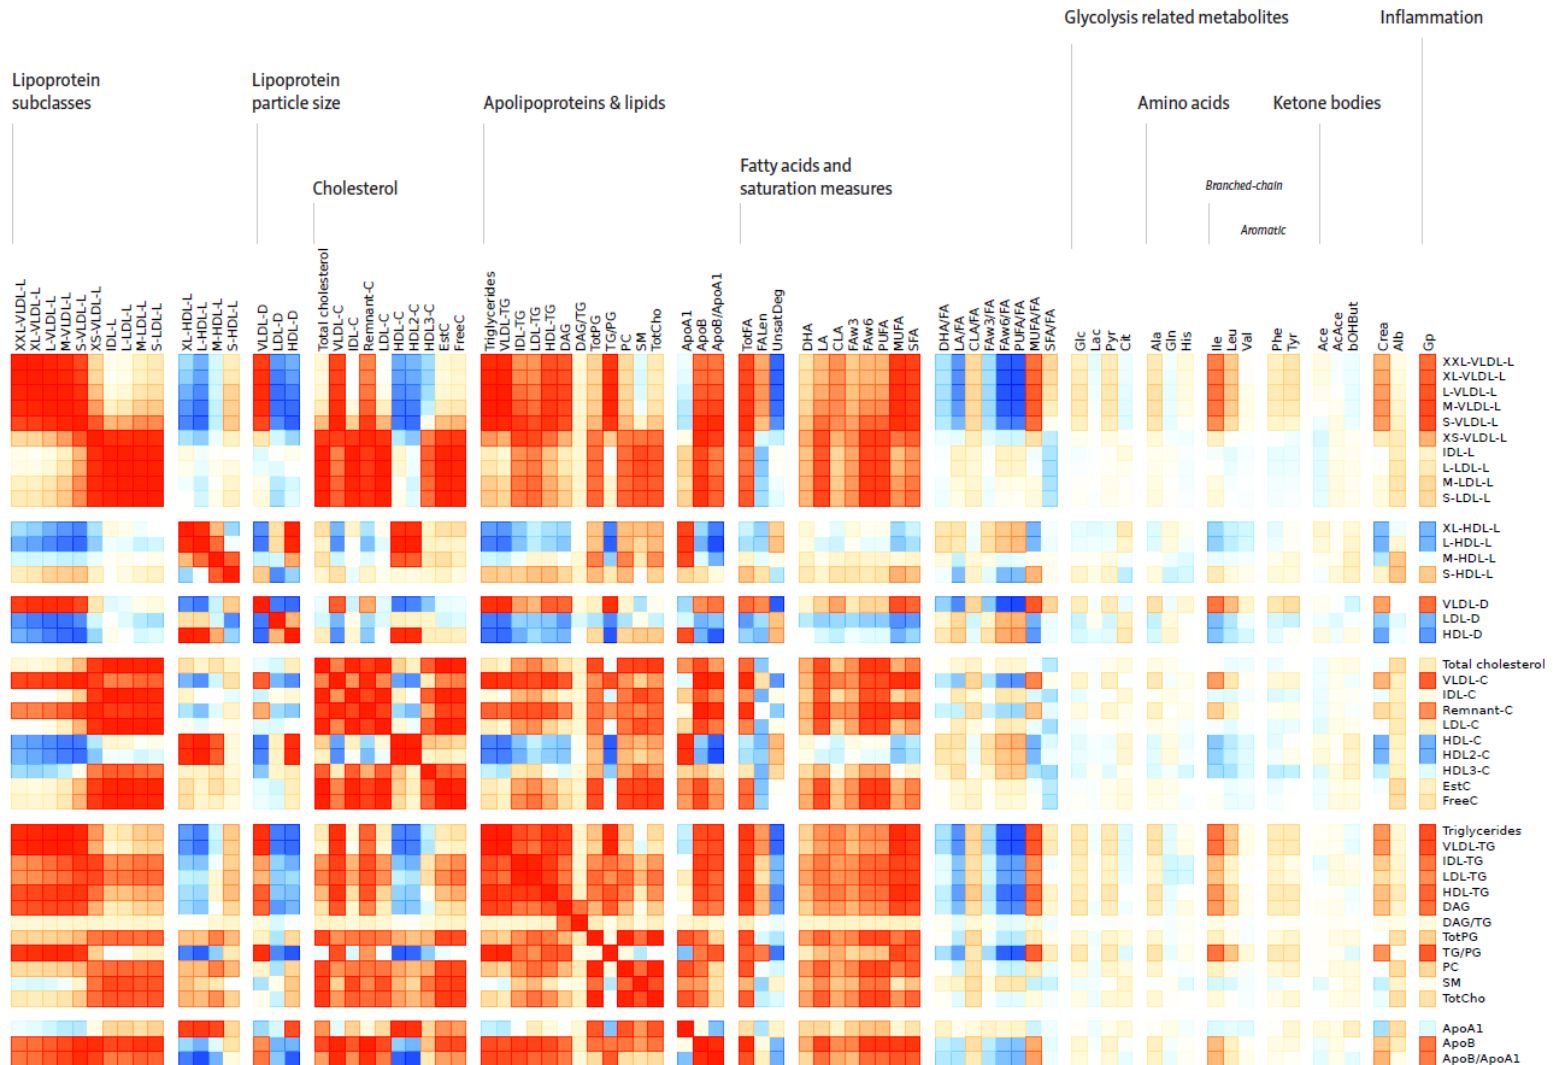

Linking methylation to expression

| | Gene | Function |
|------------------------|---------------|------------------------------------|
| Triglycerides | | |
| cg00574958 | <i>CPT1A</i> | lipid catabolism |
| cg17058475 | <i>CPT1A</i> | lipid catabolism |
| cg11024682 | <i>SREBF1</i> | regulation of lipid synthesis |
| LDL cholesterol | | |
| cg27168858 | <i>DHCR24</i> | cholesterol synthesis |
| HDL cholesterol | | |
| cg27243685 | <i>ABCG1</i> | mediates cholesterol efflux to HDL |
| cg06500161 | <i>ABCG1</i> | mediates cholesterol efflux to HDL |

→ **end-product feedback control**

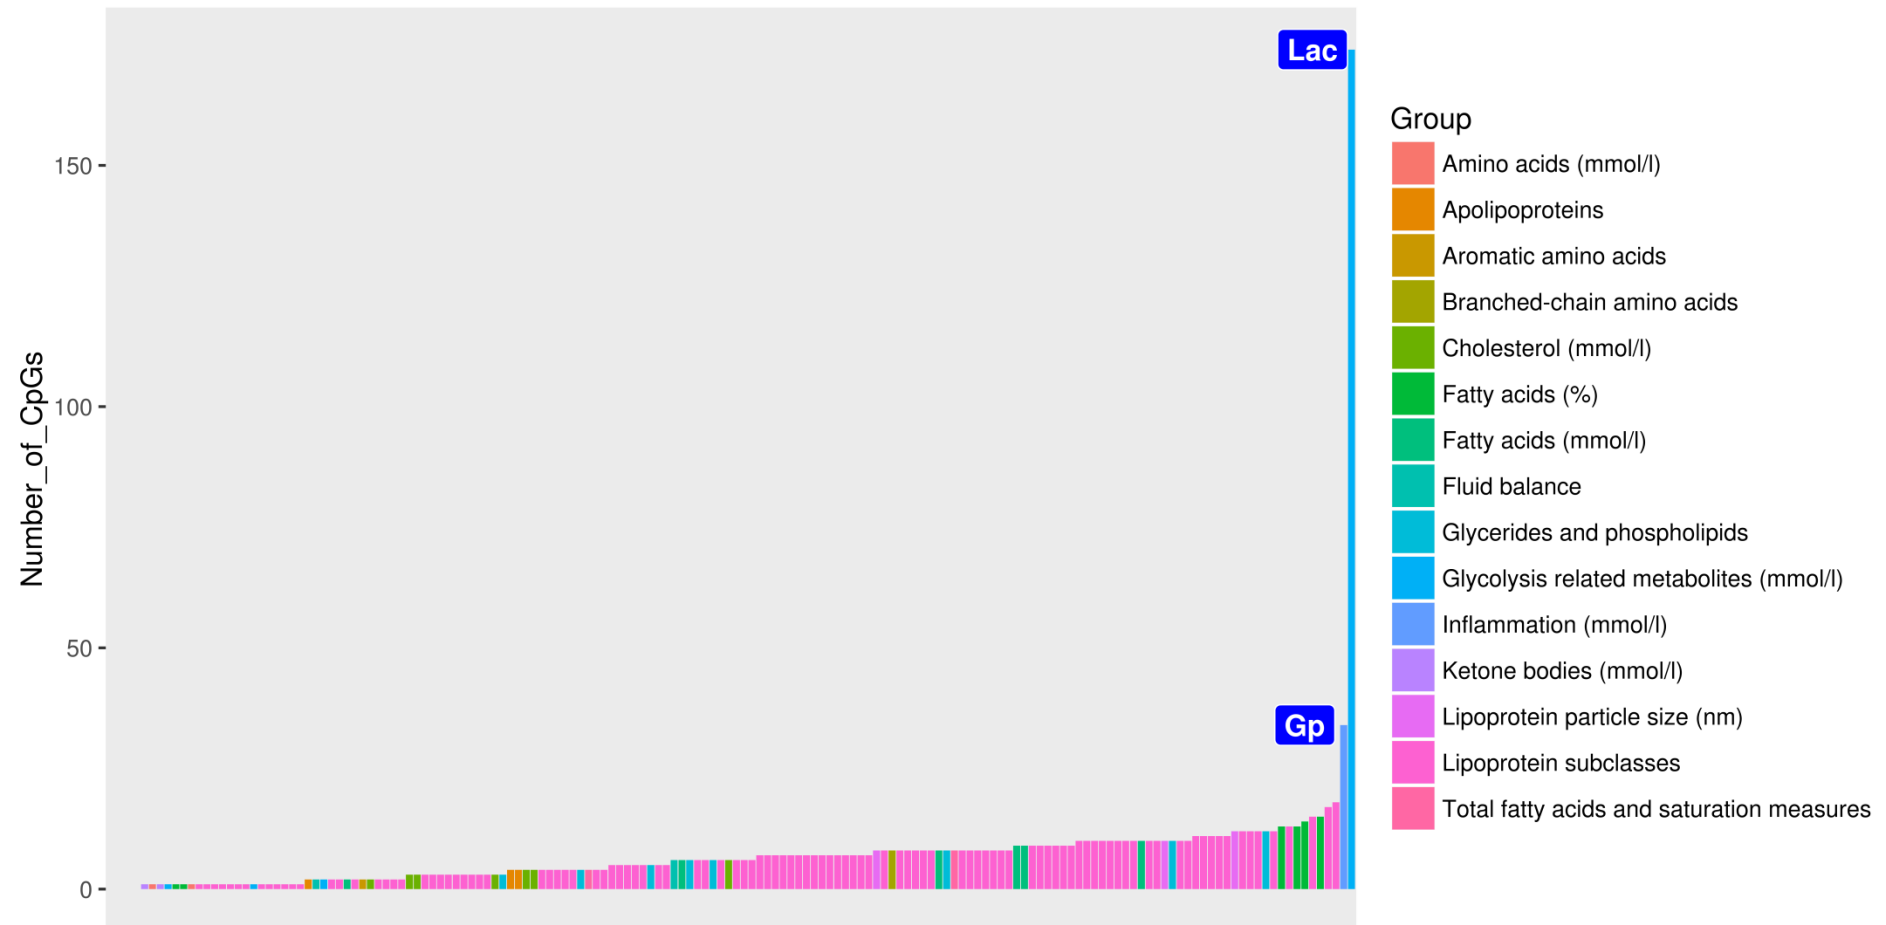

- NMR-based detection of 250 metabolites

- Combines two BBMRI rainbow projects
 - RP3 (DNA methylation) with RP4 (Metabolomics)
- Preliminary results: metabolomics data not yet complete
- LL, LLS, NTR, RS

Number of associating CpGs per metabolite

- 156 metabolites associate with at least 1 CpG

- 277 CpGs associate with at least 1 metabolite

- Metabolites associate with DNA methylation near genes involved in metabolism in circulating cells
- For blood lipids we show DNA methylation changes are the consequence of inter-individual variation in lipid levels
- Next: Mendelian randomization to infer causality for other metabolites
- Europe-wide meta-analysis: 8 cohorts, $n > 6000$
 - University of Oulu (Johannes Kettunen)
 - *LL, LLS, NTR, RS*, FINRISK, KORA, ALSPAC and NFBC
